

Quarterly Field Report

Prepared by the measurement team

This word is **bold** and this is *italic*

Cell	Cycle	Capacity	Status
A-101	500	92 percent	Pass
A-102	800	88 percent	Pass
A-103	1200	71 percent	Review

The chart on the next page summarises the discharge curves for the three cells. All values were recorded at 25 degrees with a 0.5 C discharge rate, and the review flag on A-103 is explained in section 4 of this report.

Figure 1: discharge summary

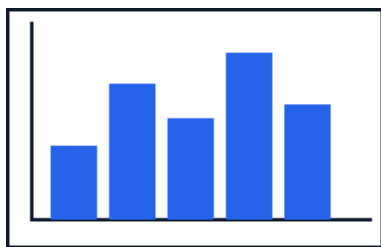

Figure 1: capacity retained after 500, 800 and 1200 cycles.

Test bench with the three cells mounted.

Reading the chart: the blue bars show the retained capacity share per cell. Cell A-103 lost 29 percent of its rated capacity by cycle 1200, which sits at the review threshold defined before the campaign started.
